

PRODUCT HIGHLIGHTS

We are highlighting some of the more commonly used products from our manufacturers. If more information about these, or any other products is required please do not hesitate to contact us.

Manufacturers we supply products from include: Endress + Hauser, Schenck Process, IFM, Weg, Shorrock Automation, WIKA.

Proline Promag 55S: This rugged electromagnetic flowmeter is specially designed for liquids with solids content (up to 15% by volume), are inhomogeneous or that tend to build-up. Examples include wood and paper pulp, fruit pulp, slurries as well as corrosive media.

“The Proline transmitter concept comprises of:

- High degree of efficiency due to the modular device and operating concept
- Software options for: electrode cleaning, advanced diagnostics, calculation of mass flow and solids content”

Surge protection: Surprisingly often surge protection is not considered when designing a new installation but in the long run can save a lot of money on repairing/replacing equipment. E + H manufactures protection units for instrument power supplies and signals, including those for use in Ex rated areas.

RV12 and RV15 Energy meters: Designed for low voltage systems (up to 500V L-L or 289V L-N) these power meters are able to record, display and transmit electrical parameters such as voltage, current, frequency, THD, power factor, active and reactive power. The RV12 is top-hat rail mounted and the RV15 is a panel mounted unit. They can be used for single phase, three phase 3 wire or three phase 4 wire systems.

RTD Temperature probes: There is a bewildering array of temperature probes offered by Endress + Hauser. They range from simple inserts to full thermometers with built-in current transmitters and can be ordered with or without thermowells.

It is highly recommended when ordering, that the temperature probe form is filled out to the best of your ability. The form may be found [here](#).
